

## Aviation Pilot Training: Advanced Placement Information

### Private Pilot

Upon proper documentation that you hold a Private Pilot Airplane Single-Engine Land certificate and can act as pilot-in-command as a private pilot, you will be granted college credit for Private Pilot Basic Ground I and II ground courses as well as Private Flight I and II and Pilot Certification flight courses.

The Private Pilot Certificate is the only certification that we grant college credit for without enrolling in flight and ground courses, paying tuition and fees, and testing out. Any training above the Private Pilot level has to be to an acceptable standard. IHCC is an FAA Part 141 Flight Training Agency and has the highest possible standards in flight training.

### Instrument Rating

The Instrument Rating phase of the Instrument Commercial curriculum, including both flight and ground school course components, must be completed as one unit. In other words, you cannot do any part of the training for the instrument rating at another school; it has to be completed start to finish at our school.

An individual holding an instrument rating, must enroll in the appropriate flight and ground course, pay tuition and fees, and complete a practical flight exam to demonstrate that an acceptable level of proficiency has been achieved before credit is earned and before enrolling the Commercial Pilot phase.

### Commercial Pilot

Like the Instrument Rating phase, the Commercial Pilot phase of the Instrument/Commercial curriculum must be completed as one complete unit start to finish at Indian Hills Community College. As with the Instrument phase, an individual holding a commercial airplane certificate must enroll in the appropriate flight and ground courses, pay tuition and fees, and complete a practical flight exam to demonstrate that an acceptable level of proficiency has been achieved before credit is earned and before enrolling in the Flight Instructor ground and flight courses.

### Transition Flight Training

When enrolling in any advanced flight training course, several hours of transition training will be required if your prior training was completed in a different type of aircraft and/or in a significantly different flight training environment to make sure that you can safely fly the aircraft used in the course.
