

Clinical Preference

Clinical Laboratory Science Programs

For the Clinical Coordinator to assign students to hospitals for internships/clinical practicums for Winter and Spring terms, your input is needed regarding your preference. Please indicate your first, second, and third choices for internship sites. Also, indicate the reason for your first choice. Please realize that some sites will require supplemental training at other sites for Microbiology/Immunochemistry.

We will make every effort to place you in your first choice, if possible. However, there are other factors that will also need to be considered by the program officials. The decision made by the program officials will be final. Remember, each lab takes only 1-2 students, maximum, and supplemental training needs to be considered.

Our policy states:

“The number of students admitted is based upon the capacity of the clinical facilities to accommodate students. If there are not enough clinical sites to accommodate all students each year, selection will be made from an alternate list (clinical waiting list) based upon the student’s most recent numerical ranking (GPA).”

Students not reaching clinical placement will be placed on the alternate waiting list and given priority over the next year’s assignments.

A listing of our current clinical affiliates is given on the following page.
